

A useful nudge. Never a nag.

A marketing and engagement notification brief

How Divine can bring people back to creators,
community, and human-made work - without burning trust.

Bring people back for something real.

Divine can use notifications to help people find creators, finish meaningful actions, and return to human-made work. The standard is simple: every interruption must earn its place.

Three relationships, three jobs

Divine to viewer

Onboarding, discovery, education, useful recaps, and carefully timed re-engagement.

Creator to audience

New work, community updates, questions, events, and behind-the-scenes moments - only with audience consent.

Divine to creator

Encouragement, useful milestones, unanswered conversations, growth opportunities, and practical support.

What this is not

A blast button, a fake-urgency machine, or a way to juice opens by making people anxious.

The promise

- Relevant: tied to a real person, action, creator, or interest.
- Respectful: independently controllable, rate-limited, and quiet overnight.
- Direct: the tap opens exactly what the message promised.
- Measurable: judged by meaningful actions and retained trust, not send volume.

Useful moments across the Divine journey.

Moment	Example use	Value to the person
First days	Help someone follow a few creators or understand bells after they have followed.	A feed that feels personal, without a generic onboarding barrage.
Viewer return	Several followed creators have posted since the person's last visit.	A concrete reason to return, ideally as one digest rather than many pushes.
Creator momentum	First comment, first repeat viewer, or an older Vine finding a new audience.	Encouragement connected to real progress, not empty vanity.
Conversation	A creator has a real unanswered comment or an opted-in audience prompt.	More human exchange and less passive scrolling.
Programs	Invite qualified creators to a challenge, collaboration, or support opportunity.	Clear access to something genuinely useful.
Community	A weekly recap, scheduled event, or joined creator channel update.	User-controlled rhythm and stronger creator relationships.

Avoid: "Come back!" Better: "Three creators you follow posted this week." Best: show who, why it matters, and where the tap goes.

A creator-support lens

- Celebrate genuine progress without turning every number into a competition.
- Help creators respond to people, learn what resonated, and find the next useful action.
- Never punish inactivity or frame declining metrics as personal failure.

The guardrails are the product.

1

No false urgency

2

No fake social activity

3

Tap goes to the promise

- Every message tells the recipient why they received it.
- Marketing and recommendations are separate from likes, comments, follows, mentions, and bells.
- Creator broadcasts require an explicit join, plus immediate mute and leave controls.
- No marketing or engagement delivery from 9pm through 6:59am recipient-local time.
- If consent, timezone, audience source, or destination is uncertain, do not send.
- Use a holdout group so ordinary organic returns are not credited to the campaign.

Conservative starting limits

Category	Initial cap
Staff-authored promotion	1 per person per 7 days
Personalized re-engagement	1 per person per 7 days
Product education	2 during onboarding, then stop
Digest	Weekly by default; user chooses
All non-social pushes combined	Maximum 2 per person per week

A calm campaign workflow.

Draft > estimate audience > test > approve > schedule > deliver > learn

What the admin app asks for

Message

Internal name, user-visible title and body, category, tap destination, preview, and campaign expiry.

Audience

Human-readable segment, exclusions, estimated size, consent status, and holdout percentage.

Delivery

Schedule, local quiet hours, frequency-cap behavior, test recipients, pause, cancel, and emergency stop.

Intent

What useful outcome should this create? Which success metric and trust guardrail decide whether it worked?

Before approval, show the truth

- Eligible people and devices.
- Excluded by opt-out, cap, stale token, or campaign rules.
- Deferred by local quiet hours and the expected delivery window.
- Unknown timezone or invalid destination.
- Exact phone preview and tap destination.
- Who authored, tested, approved, paused, or changed the campaign.

Start clear. Earn sophistication.

Good first segments

Segment	Why it can help	Important exclusion
Internal/test pubkeys	Safely prove rendering, routing, scheduling, and analytics.	Never mix with production measurement.
Zero follows	Help a new viewer make the feed personal.	Skip if they have already dismissed onboarding.
First post, no second post	Offer a practical next step or creator resource.	Do not shame or pressure.
Followed creators posted	Give a lapsed viewer a concrete, personal reason to return.	Suppress if the content is already seen.
Absent 7/14/30 days	Test whether a useful recap helps.	Do not use token age as last activity.
Unanswered comments	Help creators continue a real conversation.	Only when the comment is still relevant and safe.
Opted-in program	Events, challenges, collaborations, or creator support.	Membership must be explicit and revocable.

No opaque "high-value users" bucket. The team should always see the audience logic in plain language.

Where audience data comes from

Engagement segments should come from first-party analytics or FunnelCake-derived activity. Push-service Redis knows registered devices; it does not know whether someone meaningfully used Divine. Token freshness is delivery hygiene, not an engagement score.

What we need to decide together.

Purpose

Which two or three user problems should the first release solve? Which tempting use cases are explicitly out?

Consent

Is marketing opt-in explicit, or do we introduce category controls first and let current notification permission govern?

Quiet hours

Is 9pm-7am fixed for everyone? Can people choose a wider window? What happens when timezone is unknown?

Identity

Are preferences per Divine pubkey, per device, or both? How should multiple accounts on one device behave?

Audience data

Which system is authoritative for last active, follows, posts, views, and meaningful engagement?

Approval

Which roles may draft, test, approve, schedule, pause, or send? Does every production campaign need two people?

Copy and brand

Who signs off messages? Which claims, urgency patterns, and promotional categories are never allowed?

Frequency

What total weekly interruption budget should social, creator, product, and marketing messages share?

Measurement

What action makes each use case successful? What opt-out or disablement rate stops a campaign?

Creator agency

When do creators gain their own opted-in broadcast tools, and what send allowance protects their audience?

What has to exist behind the screen.

Layer	Responsibility
Admin app	Compose, preview, test, estimate, approve, schedule, pause, cancel, and audit.
Campaign service	Campaign state, authorization, holdouts, deduplication, expiry, and durable jobs.
Audience source	Resolve approved segment definitions into full Divine pubkeys.
Push service	Resolve pubkeys to devices, enforce consent/quiet hours/caps, and deliver through FCM.
Mobile app	Register device timezone and locale, expose preferences, route taps, and record meaningful outcomes.

Timezone is per device

Store an IANA timezone such as Pacific/Auckland, not a fixed UTC offset. That keeps daylight-saving changes correct. A phone and tablet may be in different zones, so each token is evaluated separately.

Unknown timezone policy

- Preferred: hold or skip non-essential delivery until a valid timezone is known.
- Never guess from IP, locale, or profile and risk sending during the night.

Operational safety

- Immutable audit trail, role-based access, and a global emergency pause.
- Idempotent recipient jobs, retries with expiry, invalid-token cleanup, and controlled fan-out.
- No browser access to Firebase credentials and no public broadcast endpoint.

Grow the good stuff, protect the relationship.

Success signals

Delivered, opened, correct destination reached, meaningful action completed, creator followed, video watched, comment answered, or second post made.

Trust signals

Marketing opt-out, OS permission loss, mute/unbell, repeated non-open, uninstall indicators, duplicates, or quiet-hour violations.

The experiment rule

Every meaningful campaign gets a holdout group. If we cannot show incremental value, we do not know whether the push helped.

A healthy scorecard

- Primary: incremental meaningful action within a defined window.
- Secondary: seven-day and 28-day retention lift.
- Guardrail: opt-outs, notification disablement, and send volume per person.
- Creator health: repeat viewers, conversations, and return-to-create behavior.
- Operational: delivered on time, no duplicates, correct routing, zero quiet-hour breaches.

What we do not optimize

Raw sends. Raw opens without downstream value. Streak anxiety. Manufactured urgency. Short-term return at the expense of long-term trust.

Prove trust before adding reach.

Phase	What ships	What we learn
1. Safe delivery	Staff authentication, test sends, explicit pubkey lists, previews, quiet hours, caps, expiry, pause/cancel, audit.	Can we deliver the right message to the right place at the right local time?
2. Useful segments	A few audited, plain-language segments plus holdouts and meaningful-action analytics.	Which interventions create value without increasing opt-outs?
3. Personal rhythm	Digests, user-selected timing, adaptive suppression, and broader preference controls.	Can fewer, better notifications outperform more notifications?
Later. Creator channels	Explicit audience join, creator allowance, moderation, mute/leave, prompts, and creator insights.	Can creator-to-community messaging deepen relationships without becoming spam?

First release: test sends and explicit audiences. No "send to everyone," no automatic copy, and no creator broadcast button.

The first workshop should leave with

- Two launch use cases and one creator-support use case.
- A consent and quiet-hours policy.
- Named owners for audience data, campaign approval, copy, and measurement.
- Initial frequency caps and stop conditions.
- A short list of campaigns we promise never to run.

Patterns worth borrowing, not copying.

YouTube: subscriber notification limits and personalized timing

YouTube caps channel notifications and may delay personalized delivery to a likely watch time, explicitly linking limits to long-term viewer activity.

<https://support.google.com/youtube/answer/7389684>

YouTube: bell reach metrics

Creators can see how many subscribers chose all notifications and how many are reachable on account and device settings.

<https://support.google.com/youtube/answer/9336507>

Instagram: broadcast channels

Followers receive one invitation; ongoing channel notifications require joining, and members can mute or leave.

<https://about.fb.com/news/2023/02/instagram-broadcast-channels-creators-deepen-connections-with-followers/>

Instagram: prompts, replies, and creator insights

Community messaging adds participation and feedback loops rather than measuring distribution alone.

<https://about.fb.com/news/2024/12/get-closer-to-your-community-with-replies-prompts-and-insights/>

Research: sending less can perform better

A multi-day notification optimization study reported higher open rate with fewer notifications while maintaining engagement.

<https://arxiv.org/abs/2202.08812>

Android and Apple: permission in context

Both platforms frame notifications as attention-sensitive; permission and clarity about value matter.

<https://developer.android.com/develop/ui/compose/notifications/notification-permission>

Firebase: token freshness

Registration freshness supports delivery quality but should not be mistaken for a complete engagement signal.

<https://firebase.google.com/docs/cloud-messaging/manage-tokens>

Firebase: topic messaging

Topics fit opted-in public information; direct token delivery remains appropriate for controlled and private audiences.

<https://firebase.google.com/docs/cloud-messaging/topic-messaging>

North star: make Divine easier to return to, without making it harder to leave.
